

Screen Mirroring on Android devices to Stream *The Origin of Life* Films

Step-by-Step Guide

Most Android phones and TVs will have some sort of screen mirroring  software built-in to make the process really easy. Here's how to mirror to your smart TV:

GUIDE / SCREEN MIRRORING

- 1. Switch on your TV:** Make sure your smart TV is powered on and not in standby.
- 2. Check your TV is connected to the internet:** You'll want to make sure it's using the same Wi-Fi network as your Android phone.
- 3. Turn on screen mirroring  on your phone:** Open the notification panel and look for screen mirroring  or something similar. Different versions of Android might use different terms.
- 4. Tap on the name of your TV:** Your phone will search for available devices and show your TV's model name in a list.
- 5. Let your phone and TV connect:** Your phone should connect to your TV and start to mirror the screen automatically. Your TV might ask for a passcode to be typed in first.
- 6. Log in to your account at <https://the-origin.life/purchase>.**
- 7. Choose a film that you want to stream and start playing it** (for best experience turn your phone to landscape mode).
- 8. When you're done, just open the notification panel on your phone and tap screen mirroring  again to turn it off.**

To get your phone to connect wirelessly to a TV that can't connect to the internet, you'll need an accessory to help you. One of the easiest ways to do this is by using Google Chromecast. Just follow these steps to mirror your phone to your non-smart TV:

- 1. Set up your Google Chromecast with your TV:** Make sure you set it up on the same Wi-Fi network that your phone is connected to.
- 2. Mirror to Google Chromecast:** With Chromecast plugged in, your TV should work just like a smart TV. Use the same steps as above to mirror from your phone onto the big screen.
